

Creating Value from Regulatory Compliance

Luminent's Regulatory Accelerator

Better Data • Lower Cost • Mandatory Reports • Facility Reports • Performance Metrics

The Regulatory Accelerator is an information-centric application that creates better regulatory reports for less and repackages your information to allow more effective management of risk, compliance and capital allocation.

The Regulatory Accelerator pre-populates mandatory PHMSA report forms, performs quality checks, and includes legal and technical review so you can have greater confidence in your filing. Data is automatically populated, accelerating the input process and reducing chances of data entry errors. Report data is cross-checked against known pipeline parameters and previously reported data, improving the quality and accuracy of the data.

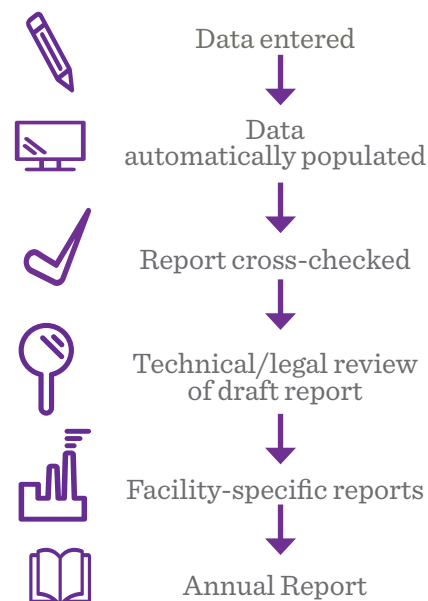

The GIS upgrade provides automated parsing of data, further reducing time and effort to prepare the report. The application manages workflows, calculates key performance metrics as per API 1173, and helps you strategically allocate capital to areas of high risk.

The Regulatory Accelerator:

- Inexpensive report preparation
- Reduces data errors
- Protects privileged information
- Creates custom facility reports for management
- Enhances management visibility of risk, compliance and capital allocation data

Accurate and Efficient
